Toastmasters AI Scheduler Agent

Vikram Arunkumar

Project Description

•Understand how the current economy affects members' ability to finance Toastmasters (TM) membership.
•Identify how TM helps members today (skills, career mobility, confidence, community).
•Quantify how many subscriptions/memberships members currently maintain and which are most important.
•Gather member feedback via surveys and interviews; collaborate with the Area Director and club officers.
•Deliver actionable recommendations on pricing, messaging, and support options (while sharing no personal information).

An AI scheduler agent can:

- Automatically assign meeting roles based on availability, experience level, and past participation
- Adapt in real time to cancellations or late changes
- Ensure fair rotation of speaking and leadership roles
- Send intelligent reminders and confirmations
- Reduce officer workload and burnout

Project Motivation

Toastmasters meetings run on time, preparation, and people showing up ready. Yet one of the most consistent challenges across clubs is scheduling—assigning roles, handling availability, sending reminders, managing last-minute changes, and making sure everyone gets fair speaking opportunities.

Club officers often spend hours:

- Chasing members for availability
- Reassigning roles when someone cancels
- Ensuring balanced participation
- Sending reminders and updates
- Maintaining fairness and consistency over time

These administrative tasks take energy away from what really matters: member growth, quality feedback, and engaging meetings.

High-Level Project Plan: AI Scheduler Agent

Phase	Objective	Key Activities	Output
1. Problem Definition	Identify Scheduling Challenges	Observe issues, Define success criteria	**Problem Statement**
2. Requirements Gathering	Define AI Needs	Identify roles, Set rules & inputs	Functional Requirements
3. Design	Plan AI Workflow	Create logic, Design system	System Outline
4. Development	Build the AI Scheduler	Code & Implement, Set Reminders	**Working AI Agent**
5. Testing	Validate & Refine	Test meetings, Adjust logic	Refined Scheduler
6. Deployment	Launch in Meetings	Integrate, Collect feedback	**Live AI Support**
7. Evaluation	Measure Impact	Review results, Assess benefits	*Improvement Insights*

Project Evaluation Metrics

- Reduction in manual effort
- Correct role assignments, few last-minute changes
- Fairness & Participation Balance, role rotation and no repeated role imbalance
- Adaptability & Resilience, reassignments completed automatically
- User experience and confidence
- Reliability
- Adoption & Usage
- Value to club leadership, more time for officers for mentoring and coaching

Desired Member Experience

- Multi agent workflows - langchain , python, OpenAI
  - Members should have beginner to medium experience in agent development , medium or intermediate experience in python
- Web Development
  - Members should have beginner to medium experience in python, APIs, Javascript
- Data Management
  - Beginner friendly, Google sheet spreadsheets for a simple, transparent datasource, experience in SQLite and CSV/JSON files for configuration and exports

Members should have experience in Git, as well as python, LangChain, OpenAI or Javascript

Roles Needed

- General Role
- AI Agents Roles
- Model Training Roles
- Fullstack & Training Roles
